*Patron:* HER MAJESTY THE QUEEN

*Officers and Council* 1980–81

*President:* J. R. GARRETT

*Vice-Presidents:* BRIAN RALPH
M. J. PEAT

*Executive Hon. Secretary:* A. W. ROBARDS

*Hon. Treasurer:* B. C. COWEN

*Hon. Secretary (Education):* P. J. EVENNETT

*Ordinary Members of Council:*

D. E. ASHHURST
G. BULLOCK
C. HAMMOND
D. A. HEMSLEY
S. J. HOLT
A. HOWIE
D. J. JOHNSON
T. MULVEY
T. F. PAGE
H. PILLER
P. C. ROBINSON

*Hon. Joint Editors:*

P. ECHLIN
H. J. G. GUNDERSEN
B. RALPH
D. C. JOY

*Journal Executive Secretary:* ANNE RALPH

*Administrator:* P. G. FLEMING

Part 1

THE APPLICATIONS OF HIGH RESOLUTION ELECTRON MICROSCOPY IN MATERIALS SCIENCE (MICROSCOPY OF AMORPHOUS, DISORDERED AND PARTIALLY ORDERED SOLIDS)

Introduction 1

L. A. FREEMAN, A. HOWIE and A. B. MISTRY. Comparison of hollow cone and axial bright field electron microscope imaging techniques 3

DAVID J. SMITH, W. O. SAXTON, J. R. A. CLEAVER and C. J. D. CATTO. The observation of amorphous materials at high voltage and high resolution 19

W. M. STOBBS and DAVID J. SMITH. Observations on the structure of amorphous arsenic by high resolution electron microscopy 29

P. E. DONOVAN and W. M. STOBBS. Observations on deformed electrolytically deposited $Ni_3P$ 39

J. P. CHEVALIER. Preliminary electron microscopical observations of defects in cold rolled amorphous $Cu_{60}Zr_{40}$ 45

A. L. GREER, W. M. STOBBS and J. A. LEAKE. Observations on the ageing of the metallic glass $Fe_{80}B_{20}$ 53

P. H. GASKELL and DAVID J. SMITH. Investigations of the structure of amorphous and partially crystalline metallic alloys by high resolution electron microscopy 63

C. J. R. GONZALEZ-OLIVER and P. F. JAMES. Internal and platinum initiated crystallization in $Na_2O.2\ CaO.3\ SiO_2$ glasses: early stages of growth 73

O. L. KRIVANEK. High resolution studies of glass–crystal interfaces 81

R. L. HINES. Electron phase microscopy at 1 MeV with graphite crystal supports 91

SUMIO IIJIMA. High resolution electron microscopy of some carbonaceous materials 99

J. P. CHEVALIER. The application of dark-field electron microscopy to the study of short-range order in alloys 113

G. VAN TENDELOO. The initial stages of ordering in alloys studied by electron diffraction and high resolution microsccpy 125

D. VAN DYCK. Fast computational procedures for the simulation of structure images in complex or disordered crystals: a new approach 141

ROGER C. ECOB, JOHN V. BEE and BRIAN RALPH. Some ordering phenomena in the $\beta$ $Cu_4Ti$ phase 153

R. Portier, D. Gratias, M. Guymont and W. M. Stobbs. The analysis of a defect in ordered $Ag_3Mg$ 163

P. D. Southwick and W. M. Stobbs. High resolution imaging of defects in a stainless steel 169

N. W. Jepps and T. F. Page. Intermediate transformation structures in silicon carbide 177

J. P. Gauthier. Using RHEED to study polytypism 189

Part 2

E. Junger and L. Bachmann. Methodological basis for an autoradiographic demonstration of insulin receptor sites on the surface of whole cells: a study using light- and scanning electron microscopy 199

J. Rostgaard and J. Tranum-Jensen. A procedure for minimizing cellular shrinkage in electron microscope preparation: a quantitative study on frog gall bladder 213

E. J. Truter, L. Böhm and E. D. F. Williams. Dimensional stability in tissues dehydrated with 2,2-dimethoxypropane for electron microscopy 233

B. L. Sheppard, Uta Sheppard and R. F. Harrison. The preparation of human spermatozoa for analytical and scanning electron microscopy 241

M. J. Wilkinson and D. H. Northcote. A simple apparatus for use in matched freeze-fracture replication 249

Anders Klingenberg. A new comparison macroscope 257

D. L. J. Quicke, R. C. Brace and P. Kirby. Intensification of nickel- and cobalt-filled neurone profiles following differential staining by rubeanic acid 267

Reimer Simonsen. Photomicrographic attachments: capabilities and limits 273

*Short Technical Notes*

M. J. W. Webb. Improvements that facilitate the operation of the Corinth 275 electron microscope 283

G. A. Meek. An automatic pumping conversion for the Philips EM-200 289

Book Reviews 291

## Part 3

### Mechanisms of Biological Staining

Introduction 293

Dr Ralph Lillie 294

Johan Tas, Mels van der Ploeg, John P. Mitchell and Norman S. Cohn. Protein staining methods in quantitative cytochemistry 295

William Galbraith, Paul N. Marshall and James W. Bacus. Microspectrophotometric studies of Romanowsky stained blood cells. I. Subtraction analysis of a standardized procedure 313

D. J. Goldstein. A microdensitometric method for the analysis of staining kinetics 331

Richard W. Horobin. Structure–staining relationships in histochemistry and biological staining. I. Theoretical background and a general account of correlation of histochemical staining with the chemical structure of the reagents used 345

Richard W. Horobin and Linda Flemming. Structure–staining relationships in histochemistry and biological staining. II. Mechanistic and practical aspects of the staining of elastic fibres 357

J. E. Scott. The molecular biology of histochemical staining by cationic phthalocyanin dyes: the design of replacements for Alcian Blue 373

Holde Puchtler, Faye Sweat Waldrop and Susan N. Meloan. On the mechanism of Mallory's phosphotungstic acid–haematoxylin stain 383

Per Kjellstrand. Mechanisms of the Feulgen acid hydrolysis 391

A. T. Sumner. Dye binding mechanisms in G-banding of chromosomes 397

Günther Geyer and Josef Makovitzky. Erythrocyte membrane topo-optical staining reflects glycoprotein conformational changes 407

C. F. A. Culling and P. E. Reid. Specific techniques for the identification of O-acylated sialic acids in colonic mucins 415

C. W. M. Adams and O. B. Bayliss High. Preliminary oxidation in histochemical staining methods for cholesterol 427
